

What is the brightness of ECCO LED compare to Conventional lightings

Current LEDs lightings are designed to replace existing lightings used existing brightness (Lux) as reference to design. However since every lighting fixtures\ reflector\ brands may differ.

There may be situations whereby LED lights selected may be lower in brightness. In such situation, customer may select a product up to their required brightness.

Reminder :Being Eco friendly promote 2 aspect

- Using a more efficient energy consuming Lightings (which covert more % of energy to light instead of heat)**
- Lowering of unnecessary brightness in existing area. Eg. Common corridors, Stairs, Paths, toilets, etc**
