

# Is it a Pity to dispose those working conventional lights ?

## Think About it..... :

- 3) The more you use those lights, the more you spend on Electricity bills. They end up burning more money than their own value itself.
- 5) Using those conventional bulbs are like cutting pockets every minute when lighted. The earlier we change, the faster we return our investments.
- 7) LED Lightings will certainly be the firm answer to future lightings, why not be the first to grip the benefits of technology soonest.
